DETAILED ACTION

1. Applicant's preliminary amendment of November 21, 2001, canceling claims 1-12, has been entered. The examiner acknowledges that this case is a continuation of 09/257,665, filed February 25, 1999, now US Patent 6,352,734. Claims 13-34 are pending.

2. Applicant is reminded that when prosecuting the parent case, at the time of allowance, the examiner and the attorney rejoined the method with the article claims so that the claims were drawn to a product which included the process limitations with the product claims since the novelty resided in the how the frozen confectionery product was made. In doing the rejoinder of claims and limitations, the patented claims read directly on the pending claims. A statutory double patenting rejection follows.

3. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

4. Claims 13-34 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-28 of prior U.S. Patent No. 6,352,734. This is a double patenting rejection.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cole et al. teach a soft frozen dessert product which is readily

extruded upon removal from a home freeze which possess good textural stability even after prolonged freezer storage. The ice cream can be whipped to any desirable overrun but will be within the range of 100-200%. Whelan teaches a low calorie fat containing frozen dessert, the dessert includes a process which involved making a pre-emulsion by homogenizing a mixture which consists essentially of polyol polyesters, milk solids, sweetener, an emulsifier, flavoring substances and water. Peterson teaches a nonfat aerated frozen dairy dessert which includes 9 weight percent milk solids nonfat, at least about 62% water, sweetener, dextrin, egg albumen stabilizer and an emulsifier.
